

60 minutes to install

Installing Gobius to your tank is easy. Instead of the traditional way of installing a level indicator, i.e. taking the tank apart and drilling holes, all you have to do is attach the sensors to the outside of the tank, connect the supplied wires and make a quick setup.

Gobius increases the comfort

Without any indicator you have no idea if the waste tank is full or empty. With Gobius you have full control. No more guessing, no more over-filling of the tank. It's very embarrassing to get the unpleasant smell of waste water running out through the air ventilation hole from your own boat.

- Gobius can be retro-fitted to any shape/size of a tank
- Suitable for all tanks; fuel, waste and water, in steel, stainless steel, aluminum, fibre glass and polyethylene
- Never comes in direct contact with the contents
- Does not require any extra maintenance – no cleaning
- Can be easily connected to extra gauges, (10 - 180 Ohm, 240 - 33 Ohm and 4 - 20 mA)
- Supports with an adapter NMEA 2000
- Low electricity consumption – less than 40 mA (12 – 24 Volts)

For all tanks and displays

The Gobius product range consists of level indicators for fuel, water and waste holding tanks and can be connected to gauges from Faria, VDO, Wema and Teleflex.

Gobius products

- Waste tanks, 4 levels
- Waste tanks, 3/4 level alarm
- Water/fuel tanks, 4 levels
- Water/fuel tanks, continuous measuring
- Industrial applications
